created by Chloe Rogers

DEFORESTATION

Forests cover 30% of our Earth.
In 100 years, all of our rainforests could be gone.

WHERE DEFORESTATION OCCURS

- Extreme rates of deforestation and historic tree loss
- High rates of deforestation and historic tree loss
- Moderate rates of deforestation and historic tree loss
- Low rates of deforestation and historic tree loss or where reforestation rates are high

LEADING CAUSES

Agriculture

Cattle Ranches

Logging

Fires

Mining

Urbanization

FACTS

1/2 of the world's rainforests have already been cleared 1.5 acres of forest are cut down every second

Up to 28,000 species are expected to become extinct in the next 25 years due to deforestion

Loss of forests contributes between 12-17% of annual global greenhouse emissions

Reuse paper and plastic bags to discourage deforestation

Planting trees helps to conserve energy and decrease deforestation
